

## Model 560-V

80.26.1554

Strong wet vacuum cleaner with built-in submersible pump with a grinder, which makes it possible to simultaneously vacuum and pump out the water. The machine is intended for vacuuming large volumes of water containing smaller amounts of e.g. leaves or moss, which are then crushed and pumped out along with the water. The machine is suitable for roof cleaning, emptying basins with many leaves in the water, vacuuming after pressure washing pavers, and other special tasks.

RONDA® 560-V is equipped with two suction motors which can be switched on separately to reduce possible foam formation. The integrated liquid-dust separator also minimizes the risk of any foam getting into the motor housing.

The machine is equipped with RONDAmatic vacuum control, which monitors the load of the suction system and warns in case of overload. If the overload continues, the vacuum control shuts down the machine.
